HARD SADDLEBAG MOUNTING INSTRUCTIONS

Step 1:

Drill mounting holes in bags.

On mounting side of the saddlebags are four round markings that indicate where to drill the mounting holes. You may adjust to fit your desired location. Ridley suggests covering the surface with masking tape before drilling to protect the paint from fracturing.

Because the suppliers brackets vary from shipment to shipment, we suggest measuring the bolt and selecting the appropriate drill bit size.

Step 2:

Mount brackets to saddlebags.

Using the supplied eight, hex-head bolts with washers, nuts, and 1/4 aluminum spacers, mount the brackets to the saddlebags. The bracket with the 1/2” fender bracket hole should be mounted to the front set of mounting holes. The bracket with the smaller mounting hole should be mounted to the rear set of mounting holes.

Step 3:

Mount Saddlebags to Rear Fender.

First, remove the middle fender strut bolt and the rear frame to fender bracket bolt.

Next, place the saddlebag with the lid in the open position up to the side of the motorcycle. Install the longer bolt with washer into the rear bag mount bracket, then place the longer aluminum spacer between the bag bracket and fender. Install the bolt into the middle bolt hole on the fender bracket. Hand tighten bolt.

Second, install the large hex head bolt into the front mounting bracket. Then, place the shorter aluminum spacer between the bag bracket and frame to fender bracket. Push bolt into hole and tighten.

Tighten rear and front bracket mounting bolts.
